DELL EMC

Dell Inc.

TPC Express Benchmark™ IoT Full Disclosure Report for **Dell PowerEdge R6415**

(with 4x Dell PowerEdge R6415 Servers)

Using

HBase 2.0.0 on Cloudera Distribution for Apache Hadoop Enterprise Edition 6.0

and

Red Hat Enterprise Linux Server Release 7.5

Second Edition -- April 02, 2021
(First Edition released on November 30, 2018)

First Edition - November 2018

Dell Inc. (Dell)*, the Sponsor of this benchmark test, believes that the information in this document is accurate as of the publication date. The information in this document is subject to change without notice. The Sponsor assumes no responsibility for any errors that may appear in this document.*

The pricing information in this document is believed to accurately reflect the current prices as of the publication date. However, the Sponsor provides no warranty of the pricing information in this document.

Benchmark results are highly dependent upon workload, specific application requirements, and system design and implementation. Relative system performance will vary because of these and other factors. Therefore, the TPC Express Benchmark™ V should not be used as a substitute for a specific customer application benchmark when critical capacity planning and/or product evaluation decisions are contemplated.

All performance data contained in this report was obtained in a rigorously controlled environment. Results obtained in other operating environments may vary significantly. No warranty of system performance or price/performance is expressed or implied in this report.

Dell and the Dell Logo are trademarks of Dell Inc. and/or its affiliates in the U.S. and other countries. Third party trademarks mentioned are the property of their respective owners. The use of the word partner does not imply a partnership relationship between Dell and any other company

TPC Express Benchmark™ IoT, TPCx-IoT, and IoTps, are registered certification marks of the Transaction Processing Performance Council.

The Dell products, services or features identified in this document may not yet be available or may not be available in all areas and may be subject to change without notice. Consult your local Dell business contact for information on the products or services available in your area. You can find additional information via Dell's web site at www.dell.com. Actual performance and environmental costs of Dell products will vary depending on individual customer configurations and conditions.

Abstract

This document contains the methodology and results of the TPC Express BenchmarkTM IoT (TPCx-IoT) test conducted in conformance with the requirements of the TPCx-IoT Standard Specification, Revision 1.0.3.

The test was conducted for a Scale Factor of 300 Million records with 4 Dell R6415 Servers running HBase 2.0.0 on Cloudera Distribution for Apache Hadoop Edition 6.0.0 on Red Hat Enterprise Linux Server Release 7.5.

This benchmark is now submitted for the Peer Review Board consisting of members of the TPCx-IoT sub-committee.

Preface

TPC Express Benchmark^{TM} IoT Overview

TPC Express BenchmarkTM IoT (TPCx-IoT) was developed to provide an objective measure of hardware, operating system and commercial NoSQL database software distributions, and to provide the industry with verifiable performance, price-performance and availability metrics. The benchmark models a continuous system availability of 24 hours a day, 7 days a week.

Even though the modeled application is simple, the results are highly relevant to hardware and software dealing with IoT Gateway systems in general. The TPCx-IoT stresses both hardware and software including database APIs and network connections to the database. This workload can be used to assess a broad range of NoSQL databases. The TPCx-IoT can be used to assess a range of NoSQL implementations in a technically rigorous and directly comparable and vendor-neutral manner. The metric effectively represents the total number of records that can be inserted into a NoSQL database per second while running queries against the database.

The TPCx-IoT kit is available from the TPC (See www.tpc.org/tpcx-iot for more information). Users must sign- up and agree to the TPCx-IoT User Licensing Agreement (ULA) to download the kit. Re-distribution of the kit is prohibited. All related work (such as collaterals, papers, derivatives) must acknowledge the TPC and include TPCx-IoT copyright. The TPCx-IoT Kit includes: TPCx-IoT Specification document, TPCx-IoT Users Guide documentation, shell scripts to set up the benchmark environment and Java code to execute the benchmark load.

The purpose of TPC benchmarks is to provide relevant, objective performance data to industry users. To achieve that purpose, TPC benchmark specifications require that benchmark tests be implemented with systems, products, technologies and pricing that:

• *Are generally available to users;*

• *Are relevant to the market segment that the individual TPC benchmark models or represents (e.g., TPCx- IoT models and represents a NoSQL database mimicking an IoT gateway system)*

• *Would plausibly be implemented by a significant number of users in the market segment the benchmark models or represents.*

The use of new systems, products, technologies (hardware or software) and pricing is encouraged so long as they meet the requirements above. Specifically prohibited are benchmark systems, products, technologies or pricing (hereafter referred to as "implementations") whose primary purpose is performance optimization of TPC benchmark results without any corresponding applicability to real-world applications and environments. In other words, all "benchmark special" implementations that improve benchmark results but not real-world performance or pricing, are prohibited.

The rules for pricing are included in the TPC Pricing Specification.

Further information is available atwww.tpc.org

Clause 1: General Items

1.1 Test Sponsor

A statement identifying the benchmark sponsor(s) and other participating companies must be provided.

This benchmark was sponsored by Dell Inc.

1.2 Parameter Settings

Settings must be provided for all customer-tunable parameters and options which have been changed from the defaults found in actual products, including by not limited to:

- *Configuration parameters and options for server, storage, network and other hardware component incorporated into the pricing structure;*
- *Configuration parameters and options for operating system and file system component incorporated into the pricing structure;*
- *Configuration parameters and options for any other software component incorporated into the pricing structure;*
- *Compiler optimization options.*

Comment 1: In the event that some parameters and options are set multiple times, it must be easily discernible by an interested reader when the parameter or option was modified and what new value it received each time.

Comment 2: This requirement can be satisfied by providing a full list of all parameters and options, as long as all those that have been modified from their default values have been clearly identified and these parameters and options are only set once.

The supporting files contain the parameters and options used to configure the components involved in this benchmark.

1.3 Configuration Diagrams

Diagrams of both measured and priced configurations must be provided, accompanied by a description of the differences. This includes, but is not limited to:

- *Total number of nodes used;*
- *Total number and type of processors used/total number of cores used/total number of threads used (including sizes of L2 and L3 caches);*

- *Size of allocated memory, and any specific mapping/partitioning of memory unique to the test;*
- *Number and type of disk units (and controllers,) if applicable;*
- *Number of channels or bus connections to disk units, including their protocol type;*
- *Number of LAN (e.g., Ethernet) connections and speed for switches and other hardware components physically used in the test or are incorporated into the pricing structure;*
- *Type and the run-time execution location of software components.*

Measured Configuration:

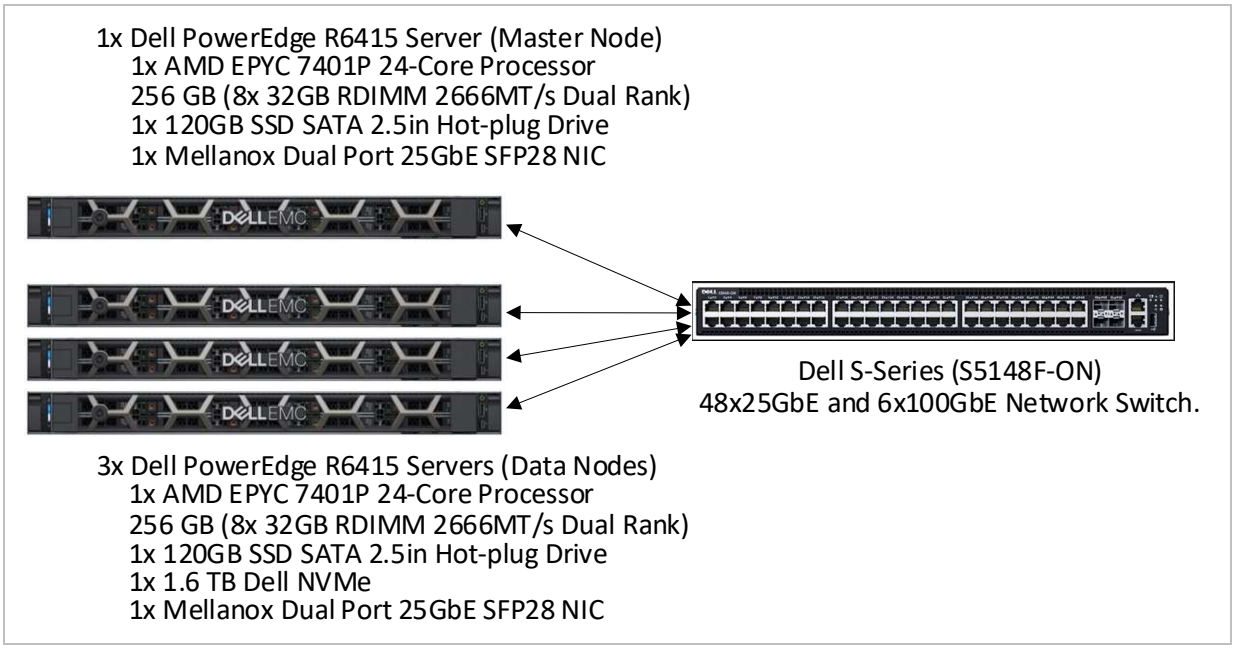

Figure 1-1 Measured Configuration

The measured configuration consisted of

- Total Nodes: 4
- Total Processor/Cores/Threads: 4/96/192
- Total Memory: 1.02TB
- Total Number of Storage Devices: 7
- Total Storage Capacity: 7.04TB

Server nodes details:

- 4x Dell PowerEdge R6415 Servers, each with:
  - Processors/Cores/Threads: 1/24/48
  - Processor Model: 1x AMD EPYC™ 7401P 2.0GHz 24-core
  - Memory: 256GB (8 x 32GB RDIMM 2666MT/s Dual Rank)
  - Drives: 1x 120GB SSD SATA (for all Servers)
    1x Dell 1.6TB NVMe (for all Data Node Servers)
  - Network: 1x Mellanox Dual Port 25GbE SFP28 NIC

Priced Configuration:

There are no differences between the priced and measured configurations.

1.4 Dataset Distribution

The distribution of dataset across all media must be explicitly described.

Table 1.4 describes the distribution of the dataset across all media in the system.

Table 1.4: Dataset Distribution

Server Node	Controller	Disk Drive	Description of Content
1	Perc HP740p	1 (SSD)	Operating System, Swap, Hadoop Master, Root, Temp
2-4	Perc HP740p	1 (SSD)	Operating System, Swap, Root, Temp
2-4	NVMe	NVMe0n1	Data, Temp

1.5 Software Components Distribution

The distribution of various software components across the system must be explicitly described.

Table 1.5 describes the distribution of the software components across the system.

Table 1.5: Software Component Distribution

	HDFS		HBase		YARN		Zoo Keeper
Node	NameNode	DataNode	Master	Region Server	Resource Manager	Node Manager	
1	X		X		X		X
2-4		X		X		X	X

NoSQL Database version must be disclosed.

HBase -2.0.0 on Cloudera Distribution for Apache Hadoop 6.0.0

Clause 2: Workload Related Items

2.1 Hardware & Software Tunable

Script or text used to set for all hardware and software tunable parameters must be reported.

The Supporting File Archive contains all configuration scripts.

2.2 Run Report

The run report generated by TPCx-IoT benchmark kit must be reported.

The Supporting File Archive contains the full run report. Following are extracts from the run report that lists the performance summary for both runs.

Run Report for Performance Run

```
=================================================
TPCx-IoT Performance Metric (IoTps) Report

Total Time For Warmup Run In Seconds = 2,088.09
Total Time In Seconds = 1,817.58
Total Number of Records = 300 Millions

TPCx-IoT Performance Metric (IoTps): 165,054.36

=================================================
```

Run Report for Repeatability Run

```
=================================================
TPCx-IoT Performance Metric (IoTps) Report

Total Time For Warmup Run In Seconds = 2,453.42
Total Time In Seconds = 1,804.28
Total Number of Records = 300 Millions

TPCx-IoT Performance Metric (IoTps): 166,270.48

=================================================
```

2.3 Benchmark Kit Identification

Version number of TPCx-IoT kit and checksum for the jar file and master Programs must be reported.

Kit Version **1.0.3**

```
24d1e8079cfdd240f266041bca0333b5  ./TPC-IoT-master.sh
68379f9375c7b584fc3253dfe9c4f7a6  ./tpcx-iot/lib/core-0.13.0-SNAPSHOT.jar
7bebf1e17d5c2b380df575fad160d7f8  ./IoT_cluster_validate_suite.sh
```

2.4 Benchmark Kit changes

No Modifications were made to the TPC provided kit.

Clause 3: Scale Factors and Metrics

3.1 Total Run Time

	Run 1	Run 2
Total Run Time	1,804.29	1,817.58

3.2 Performance and Price Performance

The performance metric (IoTps) must be disclosed for Run1 and Run2. Price-performance metric ($/IoTps) must be disclosed for the performance run.

	Run 1	Run 2
IoTps	166,270.48	165,054.36

$/kIoTps	**$785.58**

3.3 System Configuration Information

Storage System Software	Operating System	Other Software	System Availability Date
	Red Hat Enterprise Linux Server Release 7.5		Nov 30, 2018

Cloudera 6.0.0	
Component	**Package Version**
Apache Hadoop	hadoop-3.0.0+cdh6.0.0
HBase	hbase-2.0.0+cdh6.0.0
YARN	yarn-3.0.0+cdh6.0.0
Zookeeper	zookeeper-3.4.5+cdh6.0.0

Supporting File Index

The following index outlines the information included in the supporting file archive.

Storage System Software	Operating System	System Availability Date
Clause 1	Parameters and options used to configure and tune the SUT	Supporting Files Archive/Clause1
Clause 2	Configuration Scripts and Run Report	Supporting Files Archive/Clause2
Clause 3	System Configuration Details	Supporting Files Archive/Clause3
