***Telecommunications Technology Association (TTA)**, the Sponsor of this benchmark test, believes that the information in this document is accurate as of the publication date. The information in this document is subject to change without notice. The Sponsor assumes no responsibility for any errors that may appear in this document.*

The pricing information in this document is believed to accurately reflect the current prices as of the publication date. However, the Sponsor provides no warranty of the pricing information in this document.

Benchmark results are highly dependent upon workload, specific application requirements, and system design and implementation. Relative system performance will vary because of these and other factors. Therefore, the TPC Express Benchmark™ V should not be used as a substitute for a specific customer application benchmark when critical capacity planning and/or product evaluation decisions are contemplated.

All performance data contained in this report was obtained in a rigorously controlled environment. Results obtained in other operating environments may vary significantly. No warranty of system performance or price/performance is expressed or implied in this report.

TTA and the TTA Logo are trademarks of Telecommunications Technology Association and/or its affiliates in the U.S. and other countries. Third party trademarks mentioned are the property of their respective owners. The use of the word partner does not imply a partnership relationship between TTA and any other company

TPC Express Benchmark™ IoT, TPCx-IoT, and IoTps, are registered certification marks of the Transaction Processing Performance Council.

The TTA products, services or features identified in this document may not yet be available or may not be available in all areas and may be subject to change without notice. Consult your local TTA business contact for information on the products or services available in your area. You can find additional information via TTA's web site at http://www.tta.or.kr/eng. Actual performance and environmental costs of TTA products will vary depending on individual customer configurations and conditions.

Abstract

TTA conducted the TPC Express Benchmark™ IoT (TPCx-IoT) on the Supermicro A+ Server 2014TP-HTR with 4x H12SST-PS Nodes. The software used included Machbase 5.7.13. This report provides full disclosure of the methodology and results. All testing was conducted in conformance with the requirements of the TPCx-IoT Standard Specification, Revision 2.0.0.

The benchmark results are summarized below.

3) Red Hat Inc. 4) Machbase Inc. 5) Hewlett Packard Inc.

Audited by Pre-Publication Board

*All discounts are based on US list prices and for similar quantities and configurations. Discounts for similarly sized configurations will be similar to those quoted here, but may vary based on the components in the configuration.

Three-Year Cost of Ownership:	**$429,659 USD**
IoTps:	**2,480,917.60**
USD/kIoTps:	**$173.19 USD**

Prices used in TPC benchmarks must reflect the actual prices a customer would pay for purchase of the components in all regions specified in the result. Individually negotiated discounts are not permitted. Special prices based on assumptions about past or future purchases are not permitted. All discounts reflect standard pricing conventions for the listed components. For complete details, see the pricing section of the TPC benchmark specification. If you find that stated prices are not available according to these terms, please inform the TPC at pricing@tpc.org. Thank you.

Table of Contents

Clause 0 Preamble

0.1 TPC Express Benchmark™ IoT Overview

TPC Express Benchmark™ IoT (TPCx-IoT) was developed to provide an objective measure of hardware, operating system and commercial NoSQL database software distributions, and to provide the industry with verifiable performance, price-performance and availability metrics. The benchmark models a continuous system availability of 24 hours a day, 7 days a week.

Even though the modeled application is simple, the results are highly relevant to hardware and software dealing with IoT gateway systems in general. TPCx-IoT stresses both hardware and software including database APIs and network connections to the database. This workload can be used to assess a broad range of NoSQL databases. TPCx-IoT can be used to assess a range of NoSQL implementations in a technically rigorous and directly comparable and vendor-neutral manner. The metric effectively represents the total number of records that can be inserted into a NoSQL database per second while running queries against the database.

The TPCx-IoT kit is available from the TPC (See www.tpc.org/tpcx-iot for more information). Users must sign up and agree to the TPCx-IoT User Licensing Agreement (ULA) to download the kit. Re-distribution of the kit is prohibited. All related work (such as collaterals, papers, derivatives) must acknowledge the TPC and include TPCx-IoT copyright. The TPCx-IoT Kit includes: the TPCx-IoT Specification document, the TPCx-IoT Users Guide document, shell scripts to set up the benchmark environment and Java code to execute the benchmark load.

The purpose of TPC benchmarks is to provide relevant, objective performance data to industry users. To achieve that purpose, TPC benchmark specifications require that benchmark tests be implemented with systems, products, technologies and pricing that:

- Are generally available to users;
- Are relevant to the market segment that the individual TPC benchmark models or represents (e.g., TPCx- IoT models and represents a NoSQL database mimicking an IoT gateway system)
- Would plausibly be implemented by a significant number of users in the market segment the benchmark models or represents.

The use of new systems, products, technologies (hardware or software) and pricing is encouraged so long as they meet the requirements above. Specifically prohibited are benchmark systems, products, technologies or pricing (hereafter referred to as "implementations") whose primary purpose is performance optimization of TPC benchmark results without any corresponding applicability to real-world applications and environments. In other words, all "benchmark special" implementations that improve benchmark results but not real-world performance or pricing, are prohibited.

The rules for pricing are included in the TPC Pricing Specification. Further information is available at www.tpc.org.

Clause 1 General Items

1.1 Test Sponsor

A statement identifying the benchmark sponsor(s) and other participating companies must be provided.

This benchmark was sponsored by Telecommunications Technology Association.

1.2 Parameter Settings

Settings must be provided for all customer-tunable parameters and options which have been changed from the defaults found in actual products, including by not limited to:

- *Configuration parameters and options for server, storage, network and other hardware component incorporated into the pricing structure;*
- *Configuration parameters and options for operating system and file system component incorporated into the pricing structure;*
- *Configuration parameters and options for any other software component incorporated into the pricing structure;*
- *Compiler optimization options.*

Comment 1: In the event that some parameters and options are set multiple times, it must be easily discernible by an interested reader when the parameter or option was modified and what new value it received each time.

Comment 2: This requirement can be satisfied by providing a full list of all parameters and options, as long as all those that have been modified from their default values have been clearly identified and these parameters and options are only set once.

The Supporting Files Archive contains the parameters and options used to configure the components involved in this benchmark.

1.3 Configuration Diagrams

Diagrams of both measured and priced configurations must be provided, accompanied by a description of the differences.

This includes, but is not limited to:

- *Total number of nodes used*
- *Total number and type of processors used/total number of cores used/total number of threads used (including sizes of L2 and L3 caches)*
- *Size of allocated memory, and any specific mapping/partitioning of memory unique to the test*
- *Number and type of disk units (and controllers, if applicable)*
- *Number of channels or bus connections to disk units, including their protocol type*
- *Number of LAN (for example, Ethernet) connections and speed for switches and other hardware components physically used in the test or are incorporated into the pricing structure*
- *Type and the run-time execution location of software components*

1.3.1 Measured Configuration

Figure 1-1 shows the measured configuration.

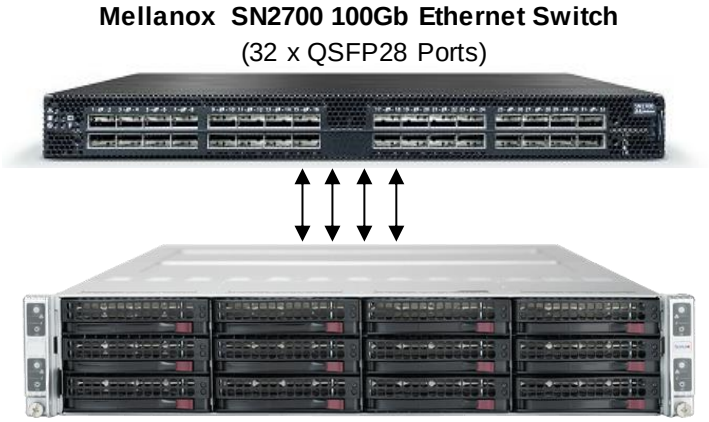

Figure 1-1 Measured Configuration

The measured configuration consisted of:

Total Nodes:	4	
Total Processors/Cores/Threads:	4/136/272	
Total Memory:	1.28TB	
Total Number of Storage Devices:	17	
Total Storage Capacity	50.92TB	
Connectivity:	Mellanox SN2700 100GbE Switch	
Servers	1x Master Node:	3x Data Nodes:
Processors/Cores/Threads:	1/64/128	1/24/48
Processor Model:	1x AMD EPYC 7702P (2.00GHz, 64-core, 256MB L3)	1x AMD EPYC 7F72 (3.20GHz, 24-core, 192MB L3)
Memory:	512 GiB	256 GiB
Storage Devices:	1x 960GB SATA SSD 1x 1TB M.2 PCIe SSD Gen3	1x 960GB SATA SSD 4x 3.84TB M.2 PCIe SSD Gen3
Network Controller:	1x Mellanox MCX516A-CCAT 100GbE 1x Supermicro AOC-MH25G-m2s2TM 10GbE and 25GbE	1x Mellanox MCX516A-CCAT 100GbE 1x Supermicro AOC-MH25G-m2s2TM 10GbE and 25GbE

The distribution of software components over server nodes is detailed in section 1.5.

1.3.2 Priced Configuration

All nodes in the measured configuration used 1x Samsung PM863 Series 960GB SATA SSD as a system disk. All nodes in the priced configuration use 1x Samsung PM883 Series 960GB SATA SSD as a substitute. The substitution was allowed under TPC Pricing rules based on the following data.

Characteristic	Priced 960GB SATA SSD	Measured 960GB SATA SSD
Model (Part Number)	PM883 (MZ7LH960HAJR)	PM863 (MZLM960N)
Interface	SATA3 6Gb/s	SATA3 6Gb/s
NAND type	Samsung V-NAND	Samsung V-NAND
Sequential Read/Write (up to)	550/520 MB/s	520/480 MB/s
Random Read/Write (up to)	98K/28K IOPS	97K/24K IOPS
Form Factor	2.5 inch	2.5 inch
Launch Date	2018/04	2015/07

1.4 Dataset Distribution

The distribution of dataset across all media must be explicitly described.

Table 1-1 describes the distribution of the dataset across all storage media in the system.

Server	Storage	Disk Drive	Description of Content
1	2.5 SATA 6Gb/s M.2 PCIe Gen3	1 x 960GB SATA SSD 1 x 1TB NVMe SSD	Operating System, Root, Swap Machbase Broker
2-4	2.5 SATA 6Gb/s M.2 PCIe Gen3	1 x 960GB SATA SSD 4 x 3.84TB NVMe SSD	Operating System, Root, Swap Machbase Data, coordinator

Table 1-1 Dataset Distribution Across Storage Media

1.5 Software Component Distribution

The distribution of various software components across the system must be explicitly described.

Table describes the distribution of the software components across the system.

Server	Broker	Coordinator	Warehouse
1	X		
2		X	X
3			X
4			X

Table 1-2 Software Component Distribution Across Nodes

The storage system software used was Machbase 5.7.13.

Clause 2 Workload Related Items

2.1 Hardware and Software Tunable Parameters

Script or text used to set all hardware and software tunable parameters must be reported.

The Supporting Files Archive contains all configuration scripts.

2.2 Run Report

The run report generated by the TPCx-IoT Kit for Performance Run and Repeatability Run must be reported.

The Supporting Files Archive contains the full run report. The following excerpts from the run report summarize the Performance Run and the Repeatability Run.

Run Report for Run 1 (Repeatability Run)

```
================================================
TPCx-IoT Performance Metric (IoTps) Report

2.3 Benchmark Kit Identification

The version of the TPCx-IoT kit and checksums for key files are listed below.

TPCx-IoT Kit Version	1.0.5

File	MD5
TPC-IoT-master.sh	aabeca02709f778295fcd1891ce3f74e
tpcx-iot/machbase-binding/lib/core-0.13.0-SNAPSHOT.jar	18b59e748a7026036e85e2e70ba45af5
IoT_cluster_validate_suite.sh	1d85705dc67fb3c767d7a1fe8775275f

2.4 Benchmark Kit Changes

No modifications were made to TPC-provided kit.

Clause 3 Scale Factor and Metrics

3.1 Scale Factor, Performance, Price-Performance

The metrics for Run 1 and Run 2 are summarized below.

	Run 1	Run 2
Scale Factor	4500000000	4500000000
Measured Run Time (seconds)	1,812.287	1,813.845
IoTps	2,483,050.42	2,480,917.60

Run2 Price-Performance: 173.19 $/kIoTps
